

Lab 11 – Create an Auction App with Angular

Create an online auction application using Angular 2.

REQUIREMENTS:

1. Create a data source object with five items in it. Each item will have: id, item (name of the item for auction), cost, and description.
2. Create a component so that the web page will display a table of items up for auction, showing item and price.
3. Clicking any of the item rows will display the full details for that item above the list of items.

EXTRA CHALLENGE: Add images for your items to display when an item is selected.

EXTRA EXTRA CHALLENGE: Add images to the list of items.

STILL HAVE TIME??: Style it up real purty like.
