

## Lab 11 - Part 1: FAVE 5 LIST

REQUIREMENTS: *Using the provided code (no changes to .html or .css files!)*...

**Create a “Fave Five” list of Names and phone numbers for the User.**

1. The user enters the names and phone numbers of their favourite five contacts and clicks “Save My Fave Five”.
2. The form disappears and a list of the five names appears.
3. When the form is submitted, a Friend constructor function is called to take the input from the form to create five Friend objects (with 2 properties) and add them to the faveFive array.
4. The final list display should loop through the faveFive array to get the names for the list.
5. For this lab, validation is not required but you should use comments to mark where validation would go in the full script.

## Lab 11 - Part 2: LOCATION OBJECT ROUTING

REQUIREMENTS: *Using the provided code (no changes to .html or .css files!)*...

**Using the single provided HTML page, use the JavaScript location object to give the impression of a three page website.**

1. Create a list of steps as comments.
2. Complete the code to execute the steps.
