

Assignment 4: Veterinarian Clinic

Format: Send zipped folder containing all files to sean.doyle@humber.ca.

BE SURE TO PUT YOUR NAME & SECTION IN THE FILENAME:

e.g. Assign3-A-YourName.zip

Purpose: To utilize object-oriented programming, and accessing the HTML document using the Document Object Model (DOM).

REQUIREMENTS: Using the provided code...

1. Create a customer object that includes the following properties: **clientName**, **phone**, **pets** (an array), and one additional property that you feel would be appropriate for a customer of a vet clinic.
2. Create two pet objects that include the following properties: **type**, **name**, **breed** and one additional property that you feel would be appropriate for a vet clinic web application to track. NOTE: These pet objects should be coded before the client object, and referenced in the pets array.
3. The webpage should display the customer name beside the "Customer" label.
4. When "View Pets" is clicked, the page displays the pet type and name for the two pets in the appropriate <p> elements. See screenshots below...

Manipulating the DOM & Using Objects

Humber Animal Clinic

Customer: **Robertson**
